

Wireless Smoke Detector

Features & Benefits

The Wireless Smoke Detector is a supervised, wireless, battery-powered photoelectric detector. It includes a built-in sounder, LED status indicator, and wireless transmitter.

The Smoke Detector notifies the Central Monitoring Console when smoke or fire is detected and if the Detector's battery is low. Both smoke alarms and low battery conditions are annunciated locally. During an alarm, the detector emits a pulsing tone and its indicator light flashes rapidly. For low battery conditions the unit emits a beep every minute.

Similar to all Lifeline CarePoint™ products the Detector sends a supervisory signal every 64 minutes to the Central Monitoring Station to assure proper Detector operation.

Specifications

Color:	White
Dimensions:	5.5 in (14 cm) x 2.5 in (12.7 cm)
Batteries:	(2) 9V Lithium
Average battery life:	2+ years
