## Enhanced Protection For Your Vulnerable Residents

CarePoint Controlled Access and Wander Management Solution  
with RoamAlert® Technology

Resident protection is more than just emergency response. It's also about proactivity - keeping residents out of harm's way and averting crisis. The CarePoint resident safety system offers fully-integrated controlled access as well as wander management capability for those with cognitive impairment. Schedule the accessibility of community doors and selectively restrict access on a by-resident basis, all from a centralized, SmartCare monitoring station. CarePoint moves beyond traditional safety once again.

### Integrated, Controlled Access

The ability to schedule the locked or unlocked state of select doors in your community is an attractive proposition. Doing this within your resident safety software application simplifies your overall safety management burden. It also puts the power of CarePoint activity reporting in your hands. Know what doors were accessed when, and have the peace of mind that certain doors cannot be accessed by residents or even staff when they shouldn't be. The CarePoint system interfaces with most common magnetic strikes and locks, providing near universal applicability.

### Wander Management

With CarePoint, wander management is simple. Through complete SmartCare integration and by leveraging patented RoamAlert technology, you can prescribe the access rights of your residents based on their level of cognitive ability or degree of memory loss. And it's all done through your resident safety software. Wandering residents wear the smallest electronic ID "tag" in the industry. The tag transmits resident-specific access rights to controlled doors when approached. The doors react accordingly, and each event, including resident data, can be escalated within SmartCare as desired for staff notification. Each event is logged and can be added to management reports. CarePoint now gives you more control over resident safety than ever before.

### Features and Benefits

- Fully integrated solution
- Wired or wireless installation on existing network
- Smallest and lightest ID tag available
- Full reporting capability
- Reduced staff training

sense and simplicity

## System Functionality

### Controlled Access

- Schedule the locked or unlocked state of any controlled door in the community over a 24 hour period.
- Interface with a wide variety of magnetic door locks and/or door strikes, keypads and sounders.
- Fire panel interface and delayed egress function ensure full compliance with local, state and national fire codes.
- Control interior and exterior doors.

### Wander Management

- Manage the access rights of residents based on cognitive impairment level or other community-defined criteria.
- Wander-managed doors activate based on proximity of wanderer, allowing free passage to other residents.

## Features and Benefits

### Fully integrated solution

Controlled access and wander management are all managed through CarePoint's SmartCare software.

### Wired or wireless installation on existing network

The CarePoint resident safety backbone supports emergency call, controlled access and wander management functionality. Networking can be done as wired or wireless based on application requirements.

### Smallest and lightest ID tag available

The wander management tag utilized is the smallest in the industry.

### Full reporting capability

Access and wander management reports are done through the SmartCare software and are fully customizable based on your unique needs.

### Reduced staff training

By using a single, integrated application for emergency call, controlled access and wander management, training of staff is simplified.

Small, lightweight RoamAlert ID tag is unobtrusive and comfortable for the resident.
